

Model 8226 GNSS Surge Suppressor

Spectracom part no. 8226-0002-0050; Rev. 7, Nov. 2017

Spectracom recommends the use of an inline coaxial protector for all products connected to an outside GNSS antenna.

Spectracom offers the Model 8226 GNSS Antenna Surge Suppressor to protect a connected GNSS receiver from damaging voltages occurring on the antenna coax cable. Voltages exceeding the impulse suppressor trip point are shunted to the system ground. The Model 8226 is designed to withstand multiple surges.

Figure 1-1: 8226 Surge suppressor with bracket

Model 8226 Surge Suppressor

1.1 Mounting Bracket Installation

Install the suppressor indoors, preferably where the coax enters the building. Connect the largest-gauge grounding wire available to the mounting bracket, using the M8 attachment screw; see Fig. 1-2:

Figure 1-2: Model 8226 with optional mounting bracket

1.2 Grounding Plate Installation

Optionally, the suppressor can be mounted to a grounding panel or bulkhead, as shown in Fig. 1-3: Spectracom offers a **Surge Protector Grounding Kit**, part number **8226-0002-0600**, that serves as a single point ground connection for the Model 8226 Surge Suppressor.

The kit includes a copper grounding plate on melamine-covered particle board, mounting hardware, copper strapping, strap clamps, ground wire, a ground clamp, copper paste, an appropriate mounting bracket, and ancillary hardware. A single point ground system is recommended to provide optimum protection from lightning strikes.

Model 8226 Surge Suppressor

- » Mount the grounding panel indoors, preferably close to where the antenna coax enters the building and direct access to the system ground is available.
- » The grounding panel must be connected to a low impedance (both low resistance and low inductance) ground system to assure proper operation of the surge protection equipment. To minimize the inductance between the ground plate and system ground interconnection, keep the copper grounding strap as straight as possible.
- » Limit bends to a radius of 8 inches or larger. Thoroughly clean the copper panel to remove any oxidation or contaminants prior to installation. Apply the supplied copper paste to all junctions on the copper panel to maintain a low-impedance connection.

Figure 1-3: Grounding kit panel installation

Each Model 8226 includes two clamp type male N connectors. These connectors can be used to splice the Model 8226 into the antenna coax. The connectors are compatible with Spectracom CAL7xxx cable assemblies and Times Microwave LMR-400 equivalent coax. Connector assembly instructions are shown below:

Model 8226 Surge Suppressor

1.3 Assembly Instructions, Type N Connectors, and Clamps

The instructions below apply to Type N Connectors, part number P051-0001-0100.

Using the manufacturer's part list, verify that all the connector parts are included. (See also-connector diagram below.)

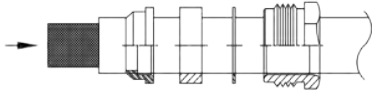

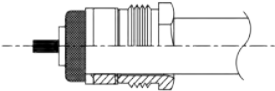

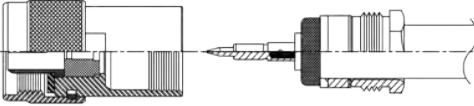

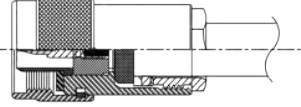

Figure 1-4: Connector component; and below Table 1-1: Connector Assembly

Cable Assembly Instructions - Clamp	
Step 1.	<p>⊙ Stripping Braid Wire</p> <p>1. Strip the braid wire where the connectors will be installed. Strip the cable as shown in illustration on the right; follow the cable stripping dimensions as recommended by the connector manufacturer.</p> 
Step 2.	<p>⊙ Nut, Washer, Gasket, and Clamp</p> <p>1. Place all the parts in order and make sure the assembly direction is correct:</p> 
Step 3.	<p>⊙ Spreading Braid Wire and Stripping Inner conductor</p> <p>1. Fold the braid wire backward onto the braid clamp and make it spread evenly:</p> 
Step 4.	<p>⊙ Contact Pin Soldering</p> <p>1. While soldering the contact pin, it must be soldered carefully, and the pin must remain free of tin-solder.</p> 
Step 5.	<p>⊙ Fastening the Nut</p> <p>1. Install metal screw onto nut, and spin into the connector body until hand-tight. 2. Use Wrench and tighten the nut.</p> 

1.4 Document Revision History

Revision	ECO	Description	Date
A	–	Legacy documentation	
B	2017	Reformatted instructions for latest style standards. Made minor text edits throughout. Added reference to Grounding Kit, 8226-0002-0600	Feb. 2007
C	2333	Updated Figure 1 to accurately represent new hardware.	June 2009
D	2621	Minor maintenance & adjustments made to reflect hardware changes (cable jacket dimensions).	April 2011
E	2715	Update Figure 1, additional minor document maintenance.	August 2011
6	0445	Connector assembly instructions revised.	Sept 2015
7	0121	Changed arrester model and instructions for grounding. Plus: layout and minor content modifications.	Nov. 2017
