

**Note D'information Evolution Produit /  
Design Change Notification**

Reference: SYN17381

Aug, the 7<sup>th</sup> 2017

**Equipment : EPSILON CLOCK SAS 17E & SAS 36E**

**Design Change :**

**Recommended Software Upgrade  
(Version 1.26) + using patch 1.26a or 1.26b**

*Dear Valued Customer,*

As a part of SPECTRACOM's ongoing commitment to superior product performance and reliability, we inform you that a new application software version is now available for EPSILON SAS 17E and SAS 36E products.

**Description**

The current release version V1.26 is available free of charge through our SPECTRACOM WEB site at the following address :

<https://spectracom.com/get-help/product-software>

**Changes notifications**

**NEW**

**Binary version V1.26 for all SAS E units including the following improvements:**

- Add SNMP variable in the MIB to display equipment type of the SAS E features
- 2 additional patches that can be used depending the application needed (see following page for details).

## ***Note D'information Evolution Produit / Design Change Notification***

### ***Additional useful patches***

**1.26b** patch : installed in addition to 1.26 release will stop the Telnet service with no possibility for the user to change the setting. This process can be useful if security policy of network infrastructure recommends not using Telnet service.

This patch also corrects an IP address NTP field issue.

The patch name will be tracked by the **REF 1.26b** on the Web UI of the SAS E.

**1.26a** patch : This patch is provided to come back to a normal condition if patch 1.26b has been applied (avoiding to return the unit in factory). It allows the Telnet service to work again.

This patch also corrects an IP address NTP field issue.

The patch name will be tracked by the **REF 1.26a** on the Web UI of the SAS E

### ***Previous releases***

*Binary version V1.24 for all SAS E units including the following improvements:*

- *2 x SNMP Fields correction*
