VersaPNT – Assured Position, Navigation, and Timing in a Single Solution

Applications

Ground
- Blue Force Tracking
- Vehicle navigation
- Satcom On The Move (SOTM)
- Anti IED jamming systems
- Mobile radios and C4ISR
- Robotics

Airborne
- Intelligence, Surveillance, and Reconnaissance (radar, optical, RF signals)
- Electronic warfare
- Flight analysis
- Tactical UAV navigation

Marine/Naval
- Sensor support (radars, sonars, optical, electronic warfare)
- Communication networks
- Offshore platforms

Accurate in All Conditions
- Multi-Constellation GNSS capability; optional GPS SAASM
- High performance internal time-base and inertial sensor to manage potential loss of GNSS
- GNSS time and frequency source with NTP/PTP time server
- Integrate future PNT signal sources
- Broadshield™ GNSS spoofing and jamming detection

Flexible
- Highly versatile with software configurable inputs/outputs
- Network sync, set-up and management
- Easy integration with small footprint and low size, weight and power
- Compatible with external IMU’s
- VICTORY interface compatible (optional)

Compact/Rugged
- Conduction-cooled
- Mil-performance connectors
- Configurable for multiple vehicle and airframe platforms
- Shock and vibration resistant
- Compact VITA 75 form factor

The VersaPNT provides PNT assurance in a flexible, configurable, and scalable device that allows your PNT-reliant system to function in disrupted GNSS environments. It fuses GNSS, inertial measurement, and high-performance timing oscillators with BroadShield™ threat detection and CRPA/AJAS antenna compatibility to provide reliable, trusted PNT in current and future GNSS threat environments. The rugged and highly customizable device serves as a navigation system, master clock, and network time server for mobile applications in harsh environmental conditions. The FlexFusion® sensor fusion engine combines complementary PNT signals, meaning superior PNT accuracy without resorting to the traditional brute-force, high-cost IMU approach. VersaPNT minimizes size, weight, power, and cost (SWaP-C) by combining PNT functions normally achieved through multiple independent subsystems, ready for integration into myriad ground, air, and maritime platforms.

High Performance GPS Aided Inertial Navigation System (INS)

VersaPNT provides extremely accurate positioning, attitude and orientation measurements, even in GNSS denied or disrupted environments. Measurement data is logged internally and streamed at a high output rate through a serial or LAN interface. VersaPNT is available with several GNSS receiver and IMU configurations, including SAASM. An external IMU interface is available for applications that require improved inertial drift performance.

High-Performance Time Server

VersaPNT maintains an accurate internal timing signal via a low-phase noise OCXO, MAC or CSAC oscillator, holding frequency and time accuracy for extended periods of GNSS outage. It can also be re-synchronized by an external reference. Precise time and frequency signals are available as 1 PPS, unmodulated IRIG DCLS timecode, 10 MHz, and NMEA time-of-day messages. PTP and NTP servers provide accurate time distribution over an IP network.

- NTP/PTP precise time transfer over Ethernet, including security protocols that prevent network vulnerabilities
- Low phase noise 10 MHz frequency distribution
- Configurable pulse signals, including IRIG or HaveQuick timecodes
- Serial link Time of Day (ToD) message

Reliable, Configurable, Versatile

VersaPNT incorporates a software-programmable I/O switch that allows the user to quickly configure electrical and data interfaces through a user-friendly web interface. Two Gigabit Ethernet ports and combinations of DCLS, RS-232, and RS-485 interfaces are available in the base VersaPNT. If additional interfaces are required, the VersaPNT can accommodate an internal option board to add additional existing interfaces (such as more RS-232 ports) or new ones.

Several methods of real-time system monitoring are available both locally and remotely. Analog and SNMP alarms allow the system operator to quickly recognize and diagnose issues. The exportable system event log provides information for in-depth analysis.
Interfaces

Inputs
GNSS L1, 72 Channel Receiver (SAASM GPS L1/L2 optional)
- SMA connector, 5 VDC to GNSS antenna
- Serial data for AJAS antenna
- SAASM adds key-load port

DCLS Configurable Inputs (TTL, 10 V)
- 1PPS
- IRIG DCLS (A, B, G, NASA-36), HaveQuick

Time of Day Message (NMEA0183, HaveQuick)
- Over RS232, RS485

Network Inputs
- NTP Stratum 2
- IEEE1588 v2 Slave

External IMU
- Serial data input

Outputs
DCLS Configurable (up to 4x TTL outputs, 1x 10 V output)
- 1PPS, any pulse up to 10 MHz
- IRIG DCLS (A, B, E, G, NASA-36), HaveQuick
- Over RS232, RS485
- NMEA 0183 time and position messages
- HaveQuick

Frequency
- 10 MHz, sine, +0 dBm, SMA connector

Network Interface (10/100/1000bT)
- NTP server (v3, v4)
- PTP IEEE1588 v1, v2 master

**A rugged, low phase noise OCXO option is available for high-vibration environments such as aircraft and maritime. Contact Orolia for details.
**Operational Readiness**
1PPS time of day available (hot start)
- 60 s: 1ms accuracy to UTC
- 200 s: 1µs accuracy to UTC

**EMI/EMC**
- Tested according to MIL-STD-461F

**Physical**
- Size (WxHxD): 5.8” x 2.5” x 5.0” (147.3 x 127.5 x 63.0 mm) VITA 75 compliant
- Weight: 1.0 kg (2.2 lbs)
- Mounting: On a plate, optimized for conduction cooling, 6 through holes

**Power**
- Input Voltage: 10-32 VDC
- Typical Power Draw: <25 W (with OCXO)
- Standby mode (only oscillator is powered): 0.4 W, DC power supply must be within 10 - 32 VDC

**Certification/Marking**
- RoHS, WEEE compliant

**Warranty**
- 2 years

**Optional front plate interface**

**Management & Monitoring**
**User, local:**
- Power and Status LEDs on front panel
- USB: ASCII Command Line Interface

**User, remote (LAN):**
- Status, configuration, event log, software update through web pages

**Machine, remote (LAN):**
- SNMP v2, v3 (get, set, traps)
- JSON RPC

**Network Security**
- Password protected administration accounts
- SSL/SSH-based https, ftps protocols supported for secured access to user interface
- NTP implementation supports MD5, Autokey

**Network Synchronization**
- NTP v2, v3, v4: Conforms with or exceeds RFC 1305 and RFC 5905. Supports unicast, broadcast, multicast, peering, stratum 2, MD5 encryption, autokey
- PTP v1 and v2: Master – conforms with default profile IEEE 1588. Supports layer2/layer 3, unicast/multicast
- VICTORY Interface compatible (optional)

**Environmental**
- Tested to MIL-STD-810G CH1
- Temperature, in operation: -40°C to +71°C with OCXO
- Mounting plate temperature, in storage: -45°C to +85°C
- Humidity: 95% RH, non-condensing
- Altitude: 45,000 ft
- Environmental Protection: IP 65
- Vibration MIL-STD-810G CH1 Method 514.7, Categories 12,13,14,20,21,24
- Shock: 20 g, 11 ms, sawtooth

**Service Options**
**Optional Services**
- Premium Support Package (PSP)
- Yearly Warranty extension
- Long-life support package
