

# Secure Network Synchronization

Isolated networks offer the highest level of information security for your enterprise. Spectracom offers a low-cost solution for secure synchronization of multiple isolated networks. The model 9388 Ethernet Time Server delivers Stratum-1 accuracy to isolated LANs without the need for multiple GPS appliances. NetClock® GPS Time Servers in turn distribute an accurate and legally traceable time code over a secure RS-485 data bus to the model 9388 Ethernet Time Server. This scalable solution means that you may simply add additional 9388 units as your network grows.
