SecureSync® SAASM combines Orolia’s precision time and frequency technology with an ultra-secure Selective Availability Anti-Spoofing Module (SAASM)-based GPS receiver. This system was conceived specifically to satisfy the Joint Chiefs of Staff mandate that all newly-fielded Department of Defense GPS systems be SAASM-compliant (CJCSI 6130.01C: Enclosure E). SecureSync SAASM offers a choice between two SAASM receiver options: a 24-channel Miniature Ruggedized Unit (MRU) and a 12-channel Ground-Based GPS Receiver Application Module (GB-GRAM).

Mission-critical military applications will benefit from SecureSync SAASM’s extreme reliability, security, and flexibility. An important advantage of SecureSync SAASM is its ruggedized shock and vibration-tested chassis, designed to meet MIL-STD-810F for environmental performance. The base unit provides an extremely accurate 1PPS timing signal aligned to a 10 MHz frequency signal without any 10 MHz phase discontinuity. An assortment of internal oscillator options is available to fulfill a broad range of requirements for holdover and phase noise.

The modular design enables a wide variety of highly specialized time and frequency functions. Up to 4 additional input/output modules can be added to each SecureSync SAASM to cater it to your specific needs. Choose from a vast selection of option cards to add to your configuration of timing signals, including additional 1PPS or time code (IRIG, ASCII, HaveQuick), frequency outputs (10 MHz, 5 MHz, 2.048 MHz, or 1.544 MHz), telecom T1/E1 data rates, multi-port NTP, and PTP. Modules can also be custom designed to meet the exact specifications of any military program.

SecureSync SAASM is a security-hardened network appliance designed to meet rigorous network security standards and best practices. It ensures accurate timing through multiple references, tamper-proof management, and extensive logging. Robust network protocols are used to allow for easy but secure configuration. Features can be enabled or disabled based on your network policies. Installation is aided by DHCP (IPv4), AUTOCONF (IPv6), and a front-panel keypad and display. The 1 RU chassis is powered by AC on an IEC60320 connector. DC power is also available as a primary source or as a back-up to standard AC power.
Specifications

System Performance

Network Services

Timing
- NTP v2, v3, v4: Conforms with or exceeds RFC 1305 and 5905; Supports Unicast, Broadcast, Multicast, MD5 encryption, Peering, Stratum 2, Autokey
- SNTP v3, v4: Conforms with or exceeds RFC 1769, 2030, 4330, and 5905
- Time (RFC 868)
- Daytime (RFC 867)
- IEEE-1588v2 (PTP) via option card(s)
- NTP over Anycast

Management
- IPv4/IPv6: Dual stack
- DHCPv4/DHCPv6 (AUTOCONF)/SLAAC: Automatic IP address assignment
- Authentication: LDAP, RADIUS, TACACS+
- Syslog: Logging
- SNMP: Supports v1, v2c, and v3 (no auth/auth/priv) with Enterprise MIB

Communications
- HTTP: Browser-based configuration and monitoring
- Telnet: Remote configuration
- FTP Server: Access to files (logs, etc.)
- SMTP: Email

Security Features
- Enable/Block Protocols
- Set SNMP community names and network access
- Password Protected
- Standard encryption/authentication protocols
- SSL: Web-based Interface: SSL is used to secure HTTPS protocol to access configuration and status web pages.
- SSH: SSL and data compression technologies provide a secure and efficient means to control, communicate with, and transfer data to or from the time server remotely.
- SCP: Securely transfers files to and from the time server over an SSH session.
- SFTP: FTP replacement operates over an encrypted SSH transport
- SNMP v3: Remotely configure and manage over an encrypted connection
- Alert notifications via SNMP Traps and e-mail

GPS SAASM Receivers

GB-GRAM and MRU receivers
- Connector: Type N, +5V to power active antenna
- Receiver input: L1/L2, P(Y) code (PPS), SAASM GB-GRAM
- Tracking: GB-GRAM: 12 parallel, dual-frequency channels with RAIM (Receiver Autonomous Integrity Monitoring)
- MRU: 24 total channels (12 L1 and 12 L2) for simultaneous tracking
- Security: SAASM GB-GRAM GPS PPS receiver
- Antenna/preamplifier: L1 1574.42 MHz & L2 1227.60 MHz, 40 dB gain (antenna sold separately)
- Acquisition time: Cold start <20 minutes (typical)
Oscillator
- Standard Oscillator: OCXO
- Optional Oscillators: TCXO, Low Phase Noise OCXO (LPN OCXO), Rubidium (Rb), Low Phase Noise Rubidium (LPN Rb)

Communications
Network Port
- RJ-45, 10/100 Base-T

Serial Set-up Interface
- RS-232 communications on DB-9 connector

Front Panel
- LED segments displays time
- Lockable keypad and configurable LCD display for network set-up
- Power/Status LEDs
- Zeroize flip switch and key fill

Power
Choice of
- 100-240 VAC, 50/60 Hz, ±10% or 100-120 VAC, 400 Hz, ±10% from IEC60320 connector; power cord included
- 12-17 Vdc: -15% to +20% or 21-60 Vdc, -15% to +20%, secure locking device
- Auto-failover in the case of AC and DC

Power Draw
- TCXO: 40 W normal (50 W start-up)
- OCXO: 40 W normal (50 W start-up)
- Rb: 50 W normal (80 W start-up)
- LPN Rb: 52 W normal (85 W start-up)

Agency Approvals
CE, UL, cUL, CSA, FCC part 15 class A, ROHS, WEEE

Physical & Environmental
Size/Weight
- Designed for EIA 19" rack. 16.75" W x 1.72" H (1U) x 14.33" D actual (425 mm W x 44 mm H x 364 mm D actual)
- Weight: 6.5 lbs. (2.95 kg) with Rubidium option; 6.0 lbs. (2.72 kg) without
- Rack mount hardware included

Warranty
Five Year Limited Warranty:
- Oscillator for rubidium option is warranted for two years
- Extended warranty is available

Example
A SecureSync base unit with AC power, OCXO internal oscillator, and SAASM GPS (MRU) as the primary reference is Model Number 1200-015. It comes with a 10/100 Base-T network port and 1 each 1PPS and 10 MHz output signals. Order option modules for additional input/output functions.

Option Modules
Up to 6 option modules can be accommodated per unit. The SAASM GPS module requires two card slots. See Option Module Card datasheet for details on additional option modules.

Antenna
8225S: GPS SAASM Antenna

*SAASM GPS Storage Shock Specs: MRU 35g, GB-GRAM 40g
